

ABSTRACT

CYCLOALKYL-[4-(DIFLUOROPHENYL)-OXAZOL-5-YL]-TRIAZOLO-PYRIDINES

The present invention relates to novel cycloalkyl-[4-(difluorophenyl)-oxazol-5-yl]-triazolo-pyridines, to intermediates for their preparation, to pharmaceutical compositions containing them and to their medicinal use. The compounds of the present invention are potent inhibitors of MAP kinases, preferably p38 kinase. They are useful in the treatment of inflammation, osteoarthritis, rheumatoid arthritis, cancer, reperfusion or ischemia in stroke or heart attack, autoimmune diseases and other disorders.
